Jamboard

## The whiteboard reimagined for the cloud

Jamboard × BenQ

Jamboard

Where ideas thrive!

Jamboard is an innovative 55-inch 4K whiteboard connected to the cloud. Fully integrated with the Google G Suite, it's ideal for teams already familiar with indispensable tools such as Google Drive, Google Meet and Google Sheets.

Team members can work together from multiple locations effectively, creatively, productively and securely. Jamboard transforms the most ordinary meeting places into highly collaborative workspaces – in an instant.

If your team is using Google, they should be using Jamboard!

Match any meeting room

Jamboard's different configurations such as its wall-mount and rolling-stand make it an easy-fit for meeting rooms of different sizes and layouts.

You can also pair Jamboard with supported peripherals or Google Hangouts Meet hardware in large meeting rooms to support collaboration between more colleagues.

"**Jamboard helps us focus more on the ideas, and less on translating creative direction to different teams.**"
Avi Couillard, Senior Strategist at Instrument

Intuitive user interface

Innovative machine learning tools such as handwriting recognition, shape recognition, and AutoDraw mean you can visualize your ideas and promote your team's creativity in new and collaborative ways. It's easy to sketch ideas, drop images, add notes, and pull assets directly from the web.

Moreover, jam files can be autosaved – everything gets instantly saved and stored in Google Drive, so you'll never lose any valuable information, and all ideas can be easily accessed by everyone.

Meet for Jamboard

Whiteboarding and full-screen video conferencing in one space

Get your whole team – wherever they are located – together with Meet for Jamboard, which displays scheduled meetings and allows participants to join a meeting with just one tap. Users can then seamlessly switch between video conferencing and whiteboarding at any time.

Through connections with Google Calendar and Google Hangouts, you can schedule meetings almost instantaneously. Jamboard with full-screen video conferencing makes worldwide collaboration smooth and seamless.
Easy admin for IT staff

Through the Google admin console, IT staff can easily manage Jamboard and other meeting room resources remotely from a single location, which maximizes efficient usage. This makes Jamboard the perfect meeting room solution, helping all employees including top management to work more efficiently.

G Suite integration

Jamboard is one of the core services in the Google ecosystem. Indeed, you won't find G Suite integration on any other whiteboard! Jamboard is accessible anywhere there is an internet connection. From docs to sheets to slides to drives, it's easy and fast to pull the files you need and access all your team's work. You can also brainstorm better with complete access to Google Search. Just Google an image and paste it into your jam.

It's also easy to integrate with Google Hangouts and have another team join the jam. This is a seamless process that allows everyone to brainstorm and collaborate together!

Cutting-edge security

Optional password protection secures confidential jams. The screen can be locked to keep important and relevant content permanently on display – until you unlock the screen. You'll never have to write "Do Not Erase!" again.
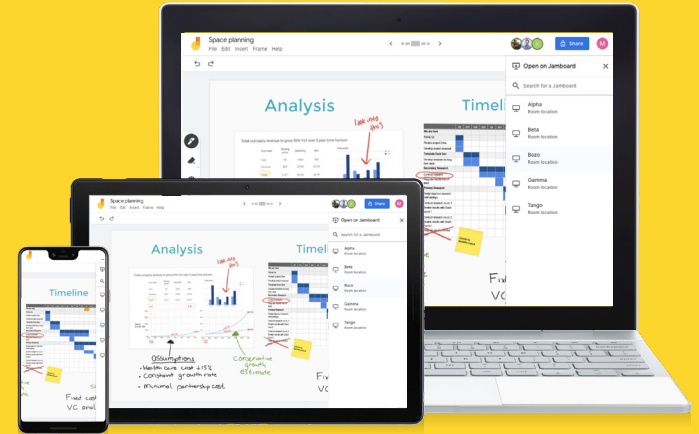

Encrypted files

All jams are stored in the cloud and all data is encrypted with 256-bit SSL encryption, while 2048-bit RSA encryption keys safeguard information, whether it's emails, chats, Google Drive files, or other data. G Suite provides independent certifications from third-parties such as ISO to confirm that their products meet your security, compliance, and data processing needs.

Stay up-to-date

Updating your Jamboard is free and easy with over-the-air updates, which ensure your Jamboard is always running the latest software. New functionalities and security updates are added regularly to Jamboard, keeping it ahead of other tools and protecting your investment into the future. Simply leave the Jamboard powered on and connected to a network so it can receive these monthly updates.

The Jamboard app is available on:

Android, iOS, Chrome OS, Windows, or macOS. The Jamboard app allows users to collaborate anytime, anywhere, from mobile phones, tablets, web, or from another Jamboard.
